

Experiment Quarantine API

This feature is deprecated and support may be removed from future versions of XNAT

Contents

- [Check The Quarantine Status Of An Experiment](#)
- [Set An Experiment's Quarantine Status to "Active"](#)
- [Set An Experiment's Quarantine Status to "Quarantined"](#)

In a project where the Quarantine setting is disabled, these API will have no effect.

Check The Quarantine Status Of An Experiment

```
GET - /data/projects/{project-id}/subjects/{subject-label | subject-id}/experiments/{experiment-label | experiment-id}/status
```

Response

Returns a simple string:

- "active"
- "quarantined"

Set An Experiment's Quarantine Status to "Active"

```
PUT - /data/projects/{project-id}/subjects/{subject-label | subject-id}/experiments/{experiment-label | experiment-id}?activate=true
```

Response

Returns the accession ID of the affected experiment

Set An Experiment's Quarantine Status to "Quarantined"

```
PUT - /data/projects/{project-id}/subjects/{subject-label | subject-id}/experiments/{experiment-label | experiment-id}?quarantine=true
```

Response

Returns the accession ID of the affected experiment
