

DICOM SCP API (Deprecated)

These API were generated for XNAT 1.6 to support a single DICOM SCP receiver definition, and are not guaranteed to work in XNAT 1.7 and later. See [DICOM SCP API](#) documentation for up-to-date XAPI URIs.

Contents

- [Get DICOM SCP Status](#)
- [Update DICOM SCP Status](#)
- [Update DICOM SCP Default on System Startup](#)

Get DICOM SCP Status

```
GET - /data/services/dicomscp
```

Parameters: none

Response: Returns one of the following strings:

- DicomSCP service is enabled (listening).
- DicomSCP service is disabled (not listening).

Update DICOM SCP Status

```
POST - /data/services/dicom/{status}
```

Parameters:

{status}

- **start:** enables the receiver
- **stop:** disables the receiver

Response: Returns one of the following strings:

- DicomSCP service is enabled (listening).
- DicomSCP service is disabled (not listening).

Update DICOM SCP Default on System Startup

```
POST - /data/services/settings/enableDicomReceiver/{default_setting}
```

Parameters:

{default_setting}

- **true:** enables the receiver immediately, and will come on by default on system startup
- **false:** disables the receiver immediately, and will not come on by default on system startup
