

Connected Scanners API (Deprecated)

This API tracks the list of scanners listed in the `<xnat:scanner>` XML property of the `xnat:imageSessionData` data type. While it may have served other purposes prior to the definition of the `dicomSCP` REST API, now it is a vestigial (but still functional) REST endpoint

Get A List Of Scanners That Have Provided Image Session Data To Your XNAT

```
GET - /data/scanners
```

Parameters: none

Response:

```
{
  "ResultSet": {
    "Result": [
      {
        "scanner": "string"
      },
      ...
    ],
    "totalRecords": "integer",
    "title": "Scanners"
  }
}
```
